

Position: Railway Cyber Security Specialist

Location: Pride Park, Derby

Salary: Competitive basic, with excellent company benefits including competitive pension scheme and private healthcare

The Role:

To maintain our growth in the UK rail market, AEGIS is seeking an experienced Engineer to strengthen our Cyber Security capabilities within the company. We are currently seeking an experienced Engineer to support our Cyber Security business and complement the capabilities of our existing team.

Essential Skills/ knowledge:

For this Senior Engineer role, we are typically looking for a minimum of 4 to 10 years' relevant cyber security experience.

Ideally you will be a degree qualified Chartered Engineer with knowledge and experience covering:

- A specific engineering discipline relating to Cyber Security.
- A broad understanding of cyber security processes, security risk assessment and threat identification, security assurance.
- Experience of delivering consultancy and independent cyber security projects.
- Experience of cyber security assurance and associated tools and techniques, for example security requirements specification, defence in depth design, patch management and/or vulnerability/penetration testing.
- Knowledge of Cyber Security Standards, specifically EN62443 series, ISO 27000 series, NIST and/or prTS50701.

An attention to detail plus the ability to see the 'bigger picture' are highly valued. Other valued attributes include a critical thinking mindset, an analytical problem-solving capability and the ability and keenness to learn.

Key Responsibilities and Accountabilities:

- Provide expertise and input on approvals and standards for a variety of cyber security projects.
- Development and production of project documentation, typically including strategies, plans, technical reports and independent assessment deliverables.

- Liaise with consultants and contractors, and interface with clients on both technical and contractual matters.
- Interface with domain experts from other disciplines within AEGIS.
- Oversee and review the work of other consultants, including taking responsibility for their technical development, if required.
- Support business development activities including development of technical and commercial proposals.
- Represent AEGIS at industry events and committees where required.
- Maintain your own competence and knowledge at the forefront of your area of expertise.

An AEGIS engineer is one who combines excellent technical skills with a commitment to deliver a first-class service to our clients, whilst living the values and culture of the business – conscientiousness, respect, integrity, excellence and fun.

If you share our vision and ambitions and are interested in joining our team, please get in touch by emailing your CV and covering letter to:
